INTRODUCTION

This guide does not require any technical knowledge, and is designed for users who are beginners to the Internet and the area of Content Management.

This guide outlines the Online Website Editor – It begins with explanations for how to use this guide, and expands to a complete list of the programs features.

The Online Editor is all you need to create a website, modify it as frequently as you require and to manage all the files (pictures and information) that will be displayed on your website.

With this software, you no longer need someone else to create or manage your website – you specify and personalize the style, content and updates of your own site.

You may want to create a website for displaying or sharing information or for your business needs. Either way, you will need your website to look interesting and professional, without the hard work of having to learn technical skills and programming.

With the editor and this guide, you can create a professional looking website in a short period of time. You can then update information, and modify your site directly from just about any computer that has Internet access – so you can make changes from a PC or laptop anytime and anywhere!

HOW TO USE THIS GUIDE

This guide combines all the information you need to get you started with creating, modifying and managing your websites with the online website editor.

The guide is divided into five main sections containing information that gives you a complete outline of specific topics. Screenshots of the application and possible error messages you may encounter are included in each section corresponding to the features outlined.

- The **Computer Basics** section gives you an overview of the main components of your computer that will be involved with getting you started with the online editor.
- The **Getting Started** section provides all the step-by-step information you will need to get the software up and running.
- The **Features** section outlines all the features available to create, modify and manage your website. Screenshots of the toolbar and icons from the software are listed for easy reference.
- The **Shortcut Keys Index** outlines the features and respective shortcuts available, to allow you quick access to the most commonly used functions in the program.
- The **Glossary** explains terms used in the guide that may be industry-specific or that would normally require IT knowledge.

Please Note

If some of the features mentioned in this document are not available in the application, then your administrator may have disabled them. If this is the case, please contact your administrator for further information.

COMPUTER BASICS

WHAT IS SOFTWARE?

Software is a general term for the various kinds of programs used to operate computers and related devices. Software is often divided into application software, systems software & web software.

Application software: are programs that users work with - such as this software application. Application software is used to perform specific tasks like word processing, desktop publishing, or in the case of this software application – Website development and content management. You can install applications using floppy disks, CD ROMS, by transferring them from other computers on a network to your computer, or in the case of this software application, it is installed directly on your server (using a file transfer method called FTP). For more information on installation, see the Installation Guide.

Systems Software: determines how hardware will operate and how your computer responds to commands. System software is any program that supports application software such as the Windows, UNIX and Linux operating systems. Systems software is usually built into the computer or installed on your computer already.

Web Software: also referred to as Internet software, is application software that uses or interacts with the Internet This online editor is web software. It enables users to use an application to create and update websites. Web software involves the interaction of users, the application and the Internet. Creating websites, and other general internet based tasks were once only limited to people with technical and programming skills, but web software has enabled all users to perform such tasks.

WHAT IS AN INTERNET BROWSER?

A browser is program that accesses and displays files and other data available on the Internet or World Wide Web in an easy to use interface. Examples of two commonly used browsers are Microsoft Internet Explorer, and Netscape Navigator. You use a browser to access the files in the online editor and to view your website. To use the online editor, you need to have Internet Explorer version 5.5 or above. (See 'Requirements and settings' section for more information).

WHAT IS A URL?

An Internet address (for example, <http://www.yourname.com/contact.html>), usually consisting of the access protocol (http), the domain name (www.yourdomain.com), and optionally the path to a file or resource residing on that server (/contact.html which in this case is a page that displays all the requirements that must be met for the software to be installed successfully). The URL is typed into the 'address' field in your browser.

WHAT IS A SERVER?

A server is a computer that provides some service for other computers connected to it. Your server may be connected to your office network of computers or you may pay an Hosting Service Provider (website host) to host your website on their server.

WHAT IS HTML?

HTML is a language used to structure text and multimedia documents and to set up hypertext links between documents – it is used extensively on the World Wide Web. It is the language used to display web pages. This application has a HTML editor, so you don't need to have knowledge of HTML. The files you create and edit will be saved as HTML files.

WHAT IS A WEBSITE?

A website is a collection of connected web pages which usually includes a homepage and links different associated pages. A Website can be created and maintained as a collection of information by an individual, group, or organization.

WHAT IS A WYSIWYG EDITOR?

WYSIWYG is an acronym for "What You See Is What You Get". It is a term used to describe software programs that display information on the monitor exactly as it displays on the page. The editor used to create and modify your website in this application is a WYSIWYG example.

GETTING STARTED

Requirements and settings

To create, edit or maintain your website using the online editor, you must be on a PC (not a Macintosh) and have Internet Explorer Version 5.5 or above. If you don't have a current version of Internet Explorer, you can download it free from Microsoft's website:
<http://microsoft.com/windows/ie/default.htm>.

(NB. You don't need this browser to visit and see your site - anyone can see it. You just need this browser to edit it).

Logging in

To start creating your website, you need to log into your account. The main reason you need to login is so that only you can access your files. Generally, each user is given their own username, and password. Your username may be (or contain) your name or any other sequence of characters. A username is required so that the program knows who you are if there are multiple users, and is able to let each user access their corresponding files. Other users may know your username, but you should keep your password confidential so as to not enable anyone else to access your files.

You need to type in the URL of your website address. You will then be prompted to enter in your username and password.

Login

Login with your username and password

The image shows a login form with a dark header bar containing the word "Login" in white. Below the header, there are two input fields: "Username:" with the text "user1" and "Password:". Below these fields is a "Login" button.

To Login simply:

1. Enter your username and password and
2. Click the 'login' button.

If you are having problems logging in:

- Check that your CAPS-LOCK key is NOT on (as the login and password are case sensitive – e.g. entering 'John' is different to entering 'john') and
- Ensure you are entering the correct username and password.

If you are still getting the following error message, you may have to contact your administrator to re-set your password.

When you Login successfully, you will be taken to the file manager. File Manager features are outlined in the following sections.

Logging out

Logging out means that you will exit the file manager and have to log back in to access your files. The files will be updated to the last point where you chose the 'save' option. To Logout:

1. Click the 'Logout' link from the File Manager.

It is always good practice to log out after you have completed and saved your work.

WORKING WITH FILES & FOLDERS

What is a file?

A file is a collection of data is stored in a particular format for future use. A file contains a name and an extension in the format filename.extension. Images, documents and web pages are files. (For more information on image files, see the section on 'Images').

What is a file extension?

A file extension is a filename's suffix (to the right of the dot ".") that indicates the type of file it is.

For example:

- letter.doc would be a document file called "letter".
- home.html would be a HTML file called "home". This is an example of a web page file.
- flower.jpg would be a JPG (image) file called "flower" (see 'Images' section on more information about image file types)

Depending on your website settings, you may see files with the extensions 'filename.php', 'filename.pl' or 'filename.asp'. This simply refers to either PHP files, Perl files or ASP files respectively, and you will be running one of these versions depending on what server you are hosting your site on. These three are all programming languages. You don't need to interact with these files in any way. They are the files that make up the application.

What is a Folder?

A folder of computer files can be thought of as being similar to a folder for paper files. A folder has a name and is a collection of related files. Folders are usually used to categorize and organize a group of common files. Folders can be created within folders. An example of a folder used to organize related files is an 'images' folder which contains all the images that will be used. This 'images' folder may contain folders within it such as 'animals', 'plants' and 'people'; where the 'animals' folder would contain image files of animals and so on.

What is Uploading?

The general definition is: "to transfer (data or programs), from one computer or device to a central, often remote computer". In the case of uploading with the online editor, it will be the transfer of files from your computer (or another drive, eg Disk or CDROM drive connected to your computer or from another computer connected to you on a network), to the server that hosts your website. Uploading is useful for when you want to use your own images or HTML files. In the online editor, you can upload your own files to customize the look of your website with your own logos, photos and information etc. (For more information see the section on 'Uploading a File').

File Manager

The File Manager is where you can see your web files and web folders.

- You will see the size and the date last modified shown for each file and folder
- You will see that the row is highlighted for the file/folder your cursor is pointing on
- You can perform general maintenance on your site from the File Manager
- When you put your mouse over certain text, a comment will appear which tells you what clicking on the link will do.

File types that are not editable (any file type that is NOT HTML) displays a grayed-out 'edit' link.

The file manager allows you to organize your files into relevant groups of folders. The Online Editor has a very simple to use, yet powerful File Manager that makes it easy to organize your files and folders.

File Manager

Upload File Create New File Create Folder

All folders are represented with the folder icon and files with the file icon .

With Files you can:

- Upload
- Create
- View
- Rename
- Delete
- Copy

With Folders you can:

- Create
- Delete
- Rename
- Copy

The Current Working Directory is located directly above the 'Editable Content' heading on the top left of the File Manager page. This will at all times reflect your current location in the file system. (The

current folder you are in). The Current Working Directory helps you to keep track of where you are in the file system as you navigate your way through folders.

If you are allowed to go back up a folder, you will see a '[Up One Level]' link. Select this link to go back up a folder. If you do not see this link, then you are in your home directory.

Creating a New Folder

Create New Folder

Enter a name for the new folder. Click 'OK' to create a folder with that

To create a new folder:

1. Click the 'Create Folder' button at the bottom of the File Manager page. This will take you to another screen that prompts you to enter a name for the new folder. (Shortcut Key to 'Create Folder' page from File Manager is ctrl + F11)
2. Enter the name you want to call your folder and click 'OK', or click 'Cancel' to go back to the File Manager. Valid folder names can only contain:
 - Alphanumeric characters (a-z, A-Z 0-9)
 - The underscore '_'
 - A dash '-'
 - A single optional dot in the name '.'.

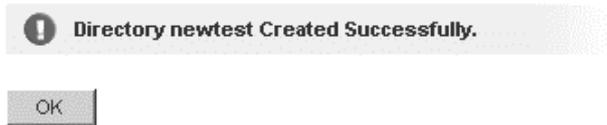

If the name of the folder you are creating already exists, you will get the following error message and you will need choose another name for the folder:

Create Folder

Once your folder has been successfully created, you will receive the following message:

Create Folder

Changing into a folder

You may need to change into a folder to view, edit, copy or delete the files that are in that folder. To change into a folder:

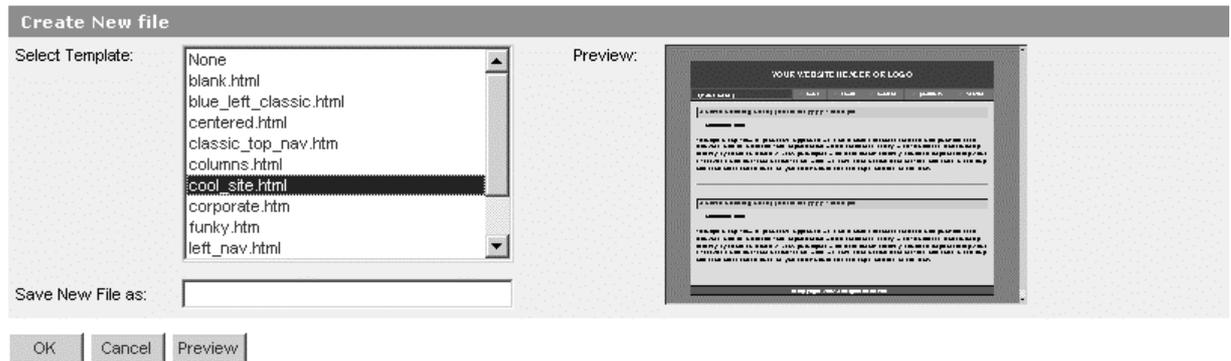

1. Select the desired folder and click on the folder's underlined name.

The Current Working Directory (located just on top of your folder and file listing) will change to reflect your current folder.

Creating a New File

Create New Page

Enter a name for the new page. Click 'OK' to create the file. Click 'Cancel' to return to the previous screen. Click 'Preview' to preview the template you have chosen.

To create a new file:

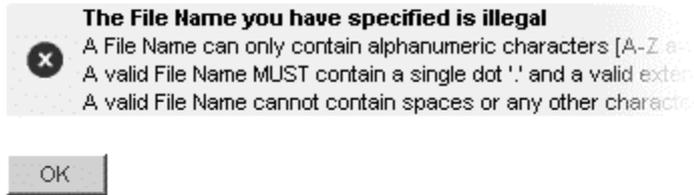

1. Click the 'Create File' button at the bottom of the File Manager. This will take you to another screen that has a drop-down menu of templates you can use on a file. (Shortcut Key to 'Create File' page from File Manager is ctrl + F)
2. A thumbnail sized preview of the templates available appears on the right for you to select from. Once you have selected a template, enter a name for the new file. Valid file names can only contain:
 - Alphanumeric characters (a-z, A-Z 0-9)
 - The underscore '_'
 - A dash '-'
3. To create the file once you have entered the new file name, click 'OK' or Click 'Cancel' to go back to the File Manager.

The file's extension is required unless specified by your administrator

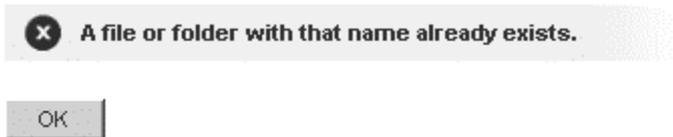

If you entered an invalid file name, the following error message will appear and you will need to enter a valid filename:

Invalid Name

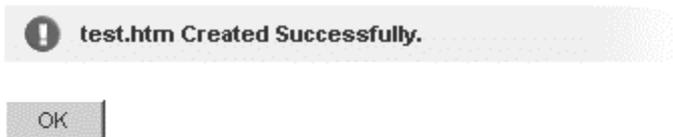

If you entered a filename that already exists, you will get the following error message and you will need to enter another file name that doesn't already exist:

Create New Page

Once your file has been successfully created, you will receive the following message:

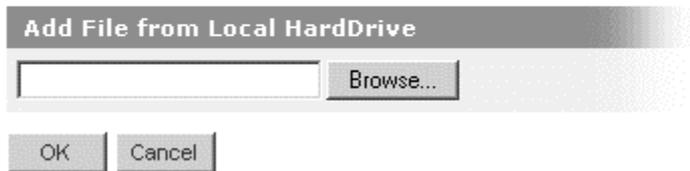

Create New Page

Uploading a File

Upload

Click 'Browse' and locate the file you wish to add. Click 'OK' to upload.

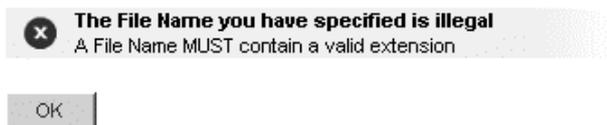

To upload a file

1. Click the 'Upload File' button at the bottom of the File Manager. This will take you to another screen that requires a file to upload. To upload a file to a folder, make sure you are in the folder when clicking 'Upload File'. (Shortcut Key to 'Upload File' page from File Manager is ctrl + F9)
2. Click the 'Browse' button to open a 'Choose File' box that allows you to select a local file to upload.
3. Once the file has been selected, click 'OK' to begin uploading the file, or click 'Cancel' to be taken back to the File Manager.

NB: Uploads may take a minute or two depending on the speed of your Internet connection.

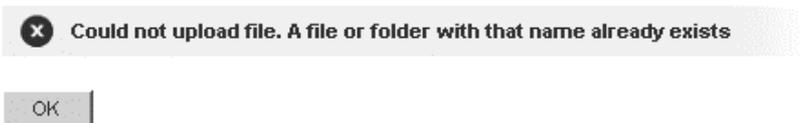

If the file is in an invalid format the following error message will appear:

Invalid Name

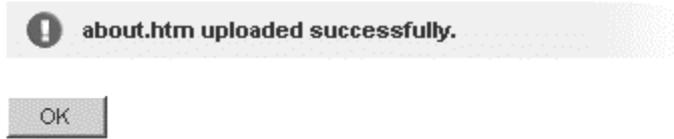

If the name of the file you are uploading already exists, you will get the following error message and you will need rename the file before uploading it:

Upload File / Image

Once your file has been successfully uploaded, you will receive the following message:

Upload File / Image

Viewing a File

To view a file

1. Select the desired file and click on the 'View' link. The file will be shown in a pop-up window.
2. Close the window to return to the File Manager.

Editing a File

To edit a file

1. Select the desired file and click on the 'Edit' link. You will be taken to the WYSIWYG Editor screen.

A full description of WYSIWYG editor commands can be found in the following section titled "Features within the editor – Editor commands".

NB: Only HTML files can be edited. Image files will have the 'edit' field greyed out.

Renaming a File or Folder

When creating a file or folder, you may have chosen a name that you then decide is not appropriate or needs to be changed to reflect its contents or context better. The 'rename' function will allow you to easily change the name of the file or folder as you require.

Rename

Enter the new name for 'about.htm'. Click 'OK' to rename. Click 'Cancel' to return to the previous screen.

To rename:

1. Locate the desired file / folder and click on the 'Rename' link. This will take you to another screen that requires a new name for the file / folder.
 2. Enter a valid name and click 'OK' to rename, or click 'Cancel' to be taken back to the File Manager.
- **For files**, the extension will be added automatically (unless specified by your administrator).

If the new file name you entered an invalid file name, the following error message will appear and you will need to enter a valid filename:

Invalid Name

 **The File Name you have specified is illegal**
A File Name MUST contain a valid extension

OK

- **For Folders**, simply rename the folder to a name of your choice, without any extensions.

If the new file or folder name you entered already exists, you will receive the following error message and you will need to enter another name for the new file/folder name:

Rename

 **A file or folder with that name already exists.**

OK

Once your file or folder has been successfully created, you will receive the following message:

Rename

 **about.htm renamed to company.htm Successfully.**

OK

Deleting a File or Folder

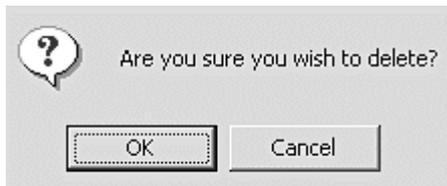

You may no longer have a need for a certain file or folder. You can choose to keep it, or if you are sure it doesn't need to be used again, you can PERMANENTLY delete it. Only use the delete function if you are sure you do not need the file/folder and its contents.

Delete

To delete a file or folder:

1. Locate the desired file or folder and click on the 'Delete' link. You will be prompted for confirmation of the deletion.

2. If you are sure you wish to delete the selected file/folder, click 'OK'. Clicking on 'Cancel' will take you back to the File Manager.

Copying a File or Folder

Copy

Enter the new name of the file you wish to copy 'company.htm'. Click 'OK' to copy. Click 'Cancel' to cancel.

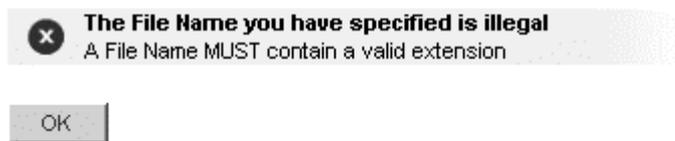

If you need two or more files that are similar, or need to copy the contents of a file or folder to make modifications, you may need to copy them.

To copy a file or folder:

1. Click on the 'copy' link corresponding to the file or folder that you wish to copy.
2. For files: Enter the name of the new file you wish to copy to, in the format filename.extension
For folders: Enter the name of the new folder that you wish to copy to.
3. Click on 'Ok' to copy (Or Click 'cancel' to return to the previous screen)

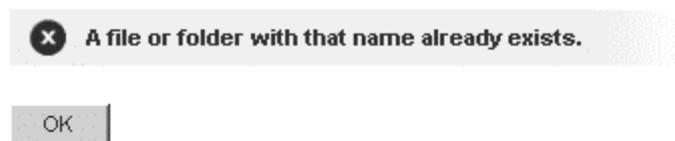

For files, if the new file name you entered an invalid file name, the following error message will appear and you will need to enter a valid filename:

Invalid Name

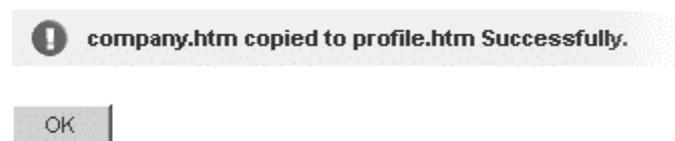

If the new file or folder name you entered already exists, you will receive the following error message and you will need to enter another name for the new file/folder name:

Copy

Once your file or folder has been successfully created, you will receive the following message:

Copy

Editor Commands

This section will list all the icons listed in the **editor toolbar**. You will find the command title in bold, a description of the command in *italic* below the title, followed by the icon that appears in the toolbar for that command (left) and a step-by-step outline on how to perform the particular command.

Some commands have **shortcut keys**. Shortcut keys are usually a combination of holding the 'ctrl' (control) key on your keyboard down with another key. These are handy shortcuts for when you become more familiar with the commands and want to perform the more common ones quickly without going through the editor. A full list of shortcut keys are provided in the section titled 'Shortcut Keys Index' and you will notice the shortcut keys noted in bold in the following list of commands (where applicable).

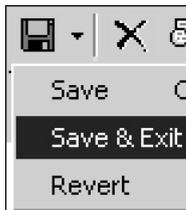

Save

It is important to save your work at regular intervals incase there is a computer crash, power failure or such that may cause your computer to shutdown. In such a situation, you will loose any unsaved work.

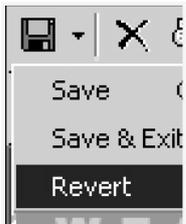

To save changes you have made to a file (without exiting) you can either:
Click the 'Save' icon or
Use the save drop down, and choose 'save' or
Use a shortcut to save: 'ctrl + s'

NB. Once you have saved a document, you cannot 'undo' any changes prior to the save.

To save changes you have made to a file and exit:
Click the 'Save' drop down
Choose 'save and exit'

The file will be saved and you will be taken back to the File Manager.

To discard changes and revert to the last saved version of the file:

Click the 'Save' drop down
Choose 'revert' You will be asked "Are you sure you want to discard changes and revert to the last saved file?"
Answering "Ok" will take you back to the last saved version of the file, answering "Cancel" will not discard your changes.

Cancel without Saving

If you make changes to a file and then decide that you do not want to save the changes, then you will need to cancel without saving.

To cancel changes without saving

1. Click the 'Cancel Without Saving' icon. A dialog box will appear, asking for confirmation. You will be asked "Are you sure you want to cancel without saving changing?"
2. Answering "Ok" will take you back to the file manager without saving any changes
3. Answering "Cancel" will keep you in the file and will not discard your changes.

Switch Editing Mode

This command allows you to switch from the WYSIWYG editor to the HTML that the page will comprise of, and back again. This feature is designed for users that have knowledge of HTML and want to see how the HTML looks for specific operations or perform certain operations directly through the HTML and not through the WYSIWYG editor.

To switch between editing modes (Ctrl+tab):

1. Click the 'Switch Editing Mode (Text or WYSIWYG)' icon. This will toggle between the editing modes (Text - showing all the HTML or WYSIWYG - showing the content of the page).

NB: This is recommended for advanced users only.

Show Preview

This is useful in previewing a file to see how it will look exactly in your browser, before changes are saved.

To show a preview of the page being edited:

1. Click the 'Show Preview' icon. This will bring up a pop-up window previewing the page being edited.
2. Click the "Show Preview" drop-down menu to choose from the preview sizes:
 - 800 x 600 (ctrl+F12)
 - 640 x 480
 - 1024 x 768

Print

This command will allow you to print out your page to your default printer. If you need to print out your pages or the HTML code of your pages, then this command comes in handy.

To print a page being edited:

1. Click the 'print' icon.

This will print the document you are currently editing to your default printer.

Spell check (F7)

This feature allows you to check spelling in your document.

To check spelling, select the text you would like to spell check (if you do not select the text, then your whole document will be checked)

Click on the spell checker icon or right click on the mouse and scroll down to 'Check spelling'.

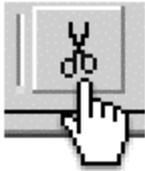

You will be taken to the first incorrectly spelled word. You can then choose to

- Change the incorrectly spelled word with the suggested words provided
- Ignore the incorrectly spelled word (i.e. not make any changes to it)

To check spelling of a single word, highlight the word and right click on the mouse to get a selection of suggested replacements. To replace the miss-spelt word with one of the suggested words, simply select one of the replacements.

Cut

If you need to remove a section of text (either to paste somewhere else or delete), you would use this feature.

To cut a portion of the document (image or text):

1. Highlight the desired portion and click the 'Cut' icon (keyboard shortcut – ctrl + x), or
2. Click the right mouse button on the desired portion and choose 'cut'

Copy

If you want to copy of a certain section of text, and you don't want to re-write it, or if you want a copy of an image that is already on the page and don't want to go through the process of inserting it, then you can use the copy command.

To copy a portion of the document:

1. Highlight the desired portion and click the 'Copy' icon (keyboard shortcut - ctrl+c), or
2. Click the right mouse button on the desired portion and choose 'copy'

If you want to copy multiple items that can't be highlighted together with the cursor, then hold down the control key and highlight the areas you need copying with the mouse cursor.

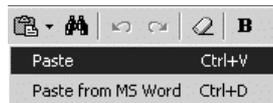

Paste (ctrl + V)

This command allows you to paste the last copied item or items to the position of your cursor.

To paste a portion that has already been cut (or copied):

1. Click where you want to place the desired portion on the page and
2. Click the 'Paste' icon (keyboard shortcut – ctrl+v), or
3. Click the right mouse button on the desired portion and choose 'paste'

Paste from Microsoft Word (ctrl + D)

When copying from Microsoft word, tags are added that you don't need. When you copy an item from Microsoft Word and paste using this command, all unnecessary formatting is removed.

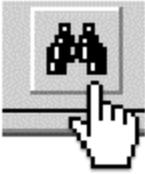

To paste from Microsoft Word:

Click the 'Paste' dropdown and select 'Paste from MS Word'. This will remove the tags that Microsoft Word automatically places and removes any of the formatting as well all in the one action.

Find & Replace

You may want to replace all instances of one word or a phrase by another word or phrase. This function allows you to search for each instance of the word/phrase and replace it with the new word/phrase.

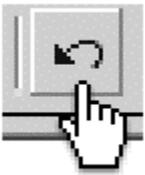

To find and replace words or phrases within the text:

1. Select the search and replace feature.
 2. Enter the word or phrase you wish to replace and type it in the "Find what" field
 3. Select the new word or phrase you wish to replace the searched text with in the 'Replace with' field.
 4. You can choose to 'find next' which allows you to manually replace instances of the searched text, or you can choose 'replace all' which allows you to replace all instances of the selected text.
- Selecting the optional 'Match Case' tab allows you to search for a word or phrase with exactly the same upper or lower-case spelling of the word or phrase entered in 'Find What'. Not selecting this option means that a word entered in the 'Find what' field with upper case characters will return a search of upper and lower case matches of the same word.
 - Selecting the optional 'Match whole word only' tab allows the search to only display the words that are an exact match of the word or phrase entered in the 'Find What' field.

Undo

This command allows you to undo the last operation you performed (unless it's a 'save'). This is useful if you have performed an incorrect operation or one that you don't want to save.

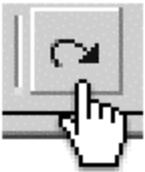

To undo the last change:

1. Click the 'Undo' icon (keyboard shortcut – ctrl+z).
Each consecutive click will undo the previous change to the document.

Redo

This command allows you to redo your last undo, hence redo it. It is essentially the opposite of an undo.

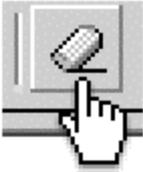

To redo the last change:

1. Click the 'Redo' icon (keyboard shortcut - ctrl+y).
Each consecutive click will repeat the last change to the document.

Remove Text Formatting

This command allows you to select a specific portion of text and remove any of the formatting which it contains – leaving it with font style 'Times New Roman', format 'Normal' and font size '3'.

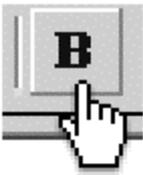

To remove any text formatting to the default Times New Roman, Normal, size 3 font:

1. Select the desired portion of text and
2. Click the 'Remove Text Formatting' button.

Bold

Bolding text makes it stand out from normal body text. It increases the thickness of the lettering. For example 'edit' is not bold, and **edit** is bold. You can bold text that you want to stand out such as headings and keywords.

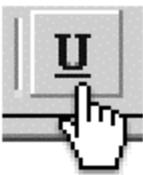

To bold text:

1. Select the desired portion of text & click the 'Bold' icon (keyboard shortcut – ctrl + b).
 - Each consecutive click will toggle this function on and off.
 - To find out whether existing text is bold, highlight the text with the cursor. If the 'bold' button is indented, then the text has been formatted to 'bold'

Underline

Underlining places a line under the selected text. Like bold, this is also a way to make text stand out more and can be used on text that you want to stand out more such as headings and keywords. eg. edit is underlined, & 'edit' is not.

To underline text:

1. Select the desired text & click the 'Underline' icon (keyboard shortcut – ctrl+u).
 - Each consecutive click will toggle this function on and off.
 - To find out whether existing text is underlined, highlight the text with the cursor. If the 'underline' button is indented, then the text has been formatted to 'underline'

Italic

Making text italic makes the letters of the selected text slant to the right. E.g. *edit* is italic, 'edit' is not.

To convert text to italic:

1. Select the desired portion of text and click the 'Italic' icon (keyboard shortcut – ctrl+ i).
 - Each consecutive click will toggle this function on and off.
 - To find out whether existing text is italic, highlight the text with the cursor. If the 'italic' button is indented, then the text has been formatted to 'italic'

Strikethrough

Strike through is text that has a horizontal line through the middle in a horizontal fashion.

To format text as strike through.

1. Select the text you want formatted by highlighting it & select the 'Strike through' icon.
2. Each consecutive click will toggle this feature on and off.

Insert Number List

This command is useful when you have rows of print in sections and you need to number and list them. Text being typed is inserted into a bulleted list.

Tips for bullet lists. In the editor, if you click the 'enter' key it will take a new paragraph or a new bullet point. To simply take a new line in the same bullet point you should press 'shift + enter'. To cancel a bullet point line simply place your cursor on the start of the line and press the backspace key.

In the following example:

*"the document comes in two formats:
filename.doc
filename.pdf"*

'*.doc*' and '*.pdf*' can be highlighted and a numbered list inserted to create, where a number prefixes each listed item:

*"the document comes in two formats:
1. filename..doc
2. filename.pdf"*

To start a numbered text list:

1. Click the 'Insert Numbered List' icon. If text has already been selected, the selection will be converted to a numbered list.

Each consecutive click will toggle this function on and off.

Insert Bullet List

As in the previous command, the highlighted consecutive items are sorted into a list. Text being typed is inserted into a bulleted list. In the previous example they were sorted with numbers, in this command they are numbered with bullets which are defining dots that prefix each listed item. From the previous example, inserting a bulleted list would produce:

*"the document comes in two formats:
• filename..doc
• filename.pdf"*

To start a bullet text list:

1. Click the 'Insert Bullet List' icon. If text has already been selected, the selection will be converted to a bullet list.

Each consecutive click will toggle this function on and off.

Decrease Indent

This command enables you to indent (or tab) portions of text by equal units in consecutive left spaces. This allows text to be organized into sections and look tidier and aligned.

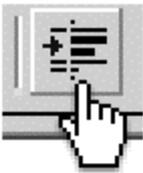

To decrease indent of a paragraph:

1. Click the 'Decrease Indent' icon.
2. Highlight the portion of text needing indenting and click the icon.

Each consecutive click will move text further to the left.

Increase Indent

This command enables you to indent (or tab) portions of text by equal units in consecutive right spaces. This allows text to be organized into sections and look tidier and aligned.

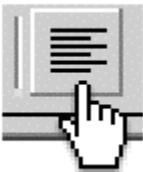

To increase indent of a paragraph:

1. Click the 'Increase Indent' icon.
2. Highlight the portion of text needing indenting and click the icon.

Each consecutive click will move text further to the right.

Align Left

This command enables you to align existing sections of text or text being written to a defined left border of the page or cell. This formatting can be used for headings and body text.

To align to the left:

1. Make a selection in the document and click the 'Align Left' icon.

Align Center

This command enables you to align existing sections of text or text being written, to the center of the page or cell. This formatting can be used for and body text but is mainly used for headings.

To align to the center:

1. Make a selection in the document and click the 'Align Center' icon.

Align Right

This command enables you to align existing sections of text or text being written to a defined right border of the page or cell. This formatting can be used for headings and body text.

To align to the right:

1. Make a selection in the document and click the 'Align Right' icon.

Align Justify

This command enables you to align existing sections of text or text being written to a defined left and right border of the page or cell. This formatting is usually used for body text.

To align justify:

1. Select the location to insert the line and click the 'Align Justify' icon.

Create / Modify HyperLink

A hyperlink is a reference or link from one particular point in a web page file to particular point in another file OR another place in the same file. When a user clicks on the link in your web page with the mouse, the browser will display the target of the link. This feature is useful for when you want to sort your website into different sections or pages and reference them easily or if you want your website to contain links to other pages in other sites. A URL is used to reference a section of another web page, a section of another website, or an anchor (see the anchor command).

After entering a hyperlink you may then need to modify it for example if the target link address changes. The modify operation allows you to modify the chosen hyperlink.

To create a hyperlink:

1. Select text/image to create the link on
2. Click the 'Create / Modify HyperLink' icon. A HyperLink window will appear, split into two sections. The top section ('Link Information') will have existing link information, if the object you selected already had a link.
 - You can also type the full URL of the page you want to link to in the URL text box.
 - You can also enter the target window information (optional) and an anchor name (if linking to an anchor - optional). This is if you want to reference a different section of the same file.
 - You can specify the file extension you need.

The bottom section contains a cut-down version of the 'File Manager'. You can use this to navigate through your site's files and folders. When you have found the file you want to link to, click the 'Get Link Location' link next to that page. The information will be automatically updated in the 'Link Information' portion of the page.

3. When finished, click the 'Insert Link' button to insert the HyperLink you just created, or click 'Remove Link' to remove an existing link.
4. Clicking 'Cancel' will close the window and take you back to the editor.
5. To modify an existing hyperlink, select the link and click on the 'Create / Modify HyperLink' icon. The HyperLink window will appear.
6. Make your changes and select the 'Insert Link' button.
7. Select 'remove link' to remove an existing link.

Create Email Link

This command will allow you to choose text or image which when clicked on, would open the user's default email program (such as outlook) and create a new message. The 'To' field would automatically contain the email address you specify, and the 'subject' field of the new email message would contain the subject entered when creating the email link. This makes it easier for users that use your site and need to email a particular person or department by automating the process where the user has to go to their email program, create a new message, and type the email address in.

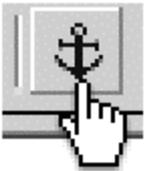

To create an email link:

1. Select text or an image on the web page you are editing where you would like the link to appear.
2. Click the 'Create Email Link' icon.
3. In the dialogue box, type the email address for the link and the subject of the email.
4. When finished, click the 'Insert Link' button to insert the email link, or 'Cancel' to close the box.

Insert / Modify Anchor

Inserting an anchor allows you to specify the place on the file where you can then reference it from another point in the document through a hyperlink (you have to name each anchor). This will be useful in situations where there are relating sections of information, that aren't necessarily displayed in one spot or if you want users to be taken to a particular place in the page when they reach a certain point. For example, you could insert an anchor to the top of a file, and call it 'top'. At the bottom of a page you could insert a hyperlink called "go to top of page". If someone viewing your website had to scroll down the page, and at the bottom of the page came across "go to top of page", then they could click on it, and get taken to the point of the anchor (which was placed at the top of the page). When inserting a hyperlink, you can choose from the anchors you have inserted from a drop down menu of anchors you have placed (if applicable).

To insert an anchor:

1. Select a desired spot on the web page you are editing and click the 'Insert / Modify Anchor' icon. In the dialogue box, type the name for the anchor.
2. When finished, click the 'Insert Anchor' button to insert the anchor, or 'Cancel' to close the box.
3. To modify an anchor select the Anchor (displayed as small yellow box when Guidelines are switched on)
4. Click the 'Insert / Modify Anchor' icon.
5. Make your changes and hit the 'Modify Anchor' button or click 'Cancel' to close the window.

Font

This menu allows you to choose the style of font for the text that you specify.

To change the font type of text:

1. Select the desired portion of text and click the 'Font' drop-down menu.
2. Select the desired font (choose from Default - Times New Roman, Arial, Verdana, Tahoma, Courier New, Georgia).

To find the type of font of existing text, highlight the specific text and look at the 'font' menu. The font menu will change to indicate the type of font used

Font Size

This menu allows you to choose the size of font for the text that you specify.

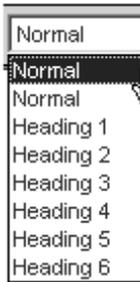

To change the size of text:

1. Select the desired portion of text and click the 'Size' drop-down menu.
2. Select the desired size (text size 1-7).

To find the font size of existing text, highlight the specific text and look at the 'font size' menu. The font size menu will change to indicate the size of the font used

Format

Using the format command allows you to format your text according to specific (predetermined and standard) design or layout. This allows you to be able to quickly arrange your documents with consistent sizes for headings.

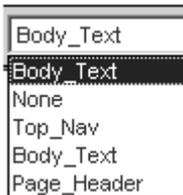

To change the format of text:

1. Select the desired portion of text and click the 'Format' drop-down menu.
2. Select the desired format (choose from Normal, and H1-H6).

Style

The values in this box are predefined styles that are called from a stylesheet. This allows you to keep styles for your site on hand to be reused throughout your website for consistency.

To change the style of text, images, form objects, tables, table cells etc:

1. Select the desired element and click the 'Style' drop-down menu, which will display all styles defined in the style-sheet. Select the desired style from the menu.

Note: this function will not work if there is no style-sheet applied to the page.

Superscript

Superscript is a character that is printed above & immediately to one side of another. eg. in 'x²' the superscript is 2.

To convert text to superscript (vertically aligned higher):

1. Select the desired portion of text and click the 'Superscript' icon. Each consecutive click will toggle this function on and off.
3. To find out whether existing text is superscript, highlight the text with the cursor. If the 'superscript' button is indented, then the text has been formatted to 'superscript'

Subscript

A symbol or character written directly beneath, next to & below a letter or number. eg. in 'x₂' the subscript is X

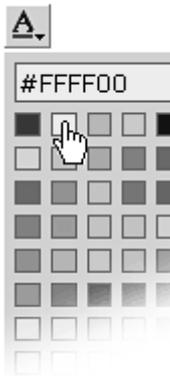

To convert text to subscript (vertically aligned lower):

1. Select the desired portion of text and click the 'subscript' icon. Each consecutive click will toggle this function on and off.
2. To find out whether existing text is subscript, highlight the text with the cursor. If the 'subscript' button is indented, then the text has been formatted to 'subscript'.

Font Color

This menu allows you to choose the color of font for the text that you specify. It allows you to format the text in your page to match the style of your web page and distinguish heading from body text etc

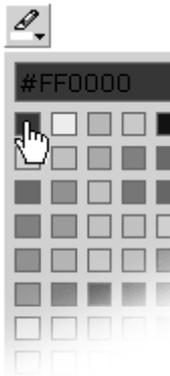

To change the color of text:

1. Select the desired portion of text and
2. Click the 'Color' drop-down menu.
3. Select the desired color from the large selection in the drop-down menu.

To find the font color of existing text, highlight the specific text and look at the 'font color' menu. The font color menu will change to indicate the font color used.

Highlight Font

This menu allows you to choose the highlight text that you specify. It allows you to format the text in your page to distinguish sections that you want to stand out.

To highlight font:

1. Select the desired portion of text and
2. Click the 'Highlight' drop-down menu.
3. Select the desired color from the large selection in the drop-down menu.

Insert Table

A table can be a collection of text or images arranged in rows and columns. You can add images or text to a table, shade it, use headings etc. Each **row & column** interval is called a **cell**. You can choose to use a table with the cells visible on the website, or invisible and only evident to you whilst editing for the sake of aiding the organization of its contents.

eg. a company may insert a table with 3 columns and x rows to display their products. The first column may contain images of the products, the next column on the same row may contain the product description, and the last column on the same row may contain the product price.

In the editor the following attributes have the following properties:

Row: allows you to specify how many rows are required in your table

Column: allows you to specify how many columns are required in your table

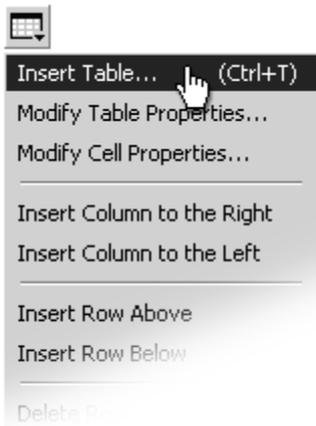

Width: allows you to specify what percentage of the page section the width of the table will span

Bgcolor: allows you to specify the background color of the table

Cell spacing: allows you to specify the size of the spacing between each cells

Cell padding: allows you to specify the size of the space that will be left clear between the wall of the cell and the contents of the cell.

Border: allows you to specify the width of the border.

To insert a table:

1. Select the desired location, and click the 'Insert Table' drop down icon (ctrl + t).

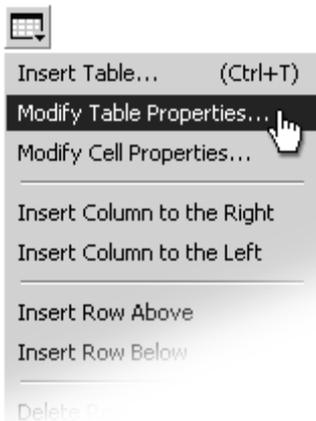

A new window will pop-up with the following fields: Rows - number of rows in table; Columns - number of columns in table; Width - width of table; BgColor - background color of table; Cell Padding - padding around cells; Cell Spacing - spacing between cells and Border - border around cells.

2. Fill in table details then click the 'Insert Table' button to insert table, or click 'Cancel' to go back to the editor.

To access any of the following table features, either click on the 'table' drop down menu, or click the right mouse button ensuring that the mouse cursor is within the table.

Modify Table Properties

This command allows you to change the properties that were specified when the table was first created.

To modify table properties:

1. Select a table or click anywhere inside the table to modify, then click the 'Modify Table Properties' icon. A pop-up window will appear with the table's properties.
2. Click the 'Modify Table Properties' button to save your changes, or click 'Cancel' to go back to the editor.

Note: this function will not work if a table has not been selected.

Modify Cell Properties

This command allows you to modify the properties the cell of the table selected.

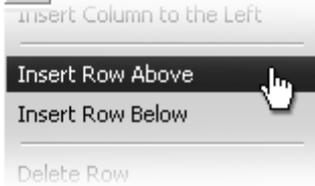

To modify cell properties:

1. Click inside the cell to modify, then click the 'Modify Cell Properties' icon. A pop-up window will appear with the cells' properties.
2. Click the 'Modify Cell Properties' button to save your changes, or click 'Cancel' to go back to the editor.

Note: this function will not work if a cell has not been selected and does not work across multiple cells.

Insert Row Above

You may find that after creating a table, you need to add an additional row. Instead of creating another table from scratch, you can add a row where you need.

To insert row above:

1. Click inside cell above which to insert a row,
2. Click the 'Insert Row Above' icon.

Each consecutive click will insert another row above the selected cell.

Note: this function will not work if a cell has not been selected.

Insert Row Below

You may find that after creating a table, you need to add an additional row. Instead of creating another table from scratch, you can add a row where you need.

To insert row below:

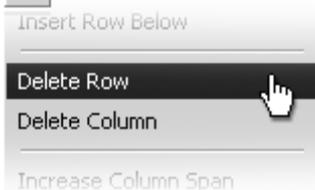

1. Click inside cell below which to insert a row
2. Click the 'Insert Row Below' icon.

Each consecutive click will insert another row below the selected cell.

Note: this function will not work if a cell has not been selected.

Delete Row

You may find that after creating a table, you need to delete row from a table that is no longer needed.

To delete a row:

1. Click inside cell which is in the row to be deleted
2. Click the 'Delete Row' icon.

Note: this function will not work if a cell has not been selected.

Insert Column to the right

You may find that after creating a table, you need to add an additional column. Instead of creating another table from scratch, you can add a column where you need.

To insert column after:

1. Click inside cell after which to insert a column
2. Click the 'Insert Column After' icon.

Each consecutive click will insert another column after the selected cell.

Note: this function will not work if a cell has not been selected.

Insert Column to the left

You may find that after creating a table, you need to add an additional column. Instead of creating another table from scratch, you can add a column where you need.

To insert column before:

1. Click inside cell before which to insert a column
2. Click the 'Insert Column Before' icon.

Each consecutive click will insert another column before the selected cell.

Note: this function will not work if a cell has not been selected.

Delete Column

You may find that after creating a table, you need to delete column from a table that is no longer needed.

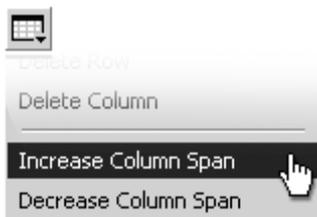

To delete a column:

1. Click inside cell which is in the column to be deleted
2. Click the 'Delete Column' icon.

Note: this function will not work if a cell has not been selected.

Increase Column Span

After the table is created, you can increase the span of a specific column/s with this command

To insert column span:

1. Click inside cell who's span is to be increased
2. Click the 'Increase Column Span' icon.

Each consecutive click will further increase the column span of selected cell.

Note: this function will not work if a cell has not been selected.

Decrease Column Span

After the table is created, you can decrease the span of a specific column/s with this command

To decrease column span:

1. Click inside cell who's span is to be decreased
2. Click the 'Decrease Column Span' icon.

Each consecutive click will further decrease the column span of the selected cell. Note: this function will not work if a cell has not been selected.

Insert Form

This button gives you access to the web form tools in the editor. These allow you to insert & modify forms.

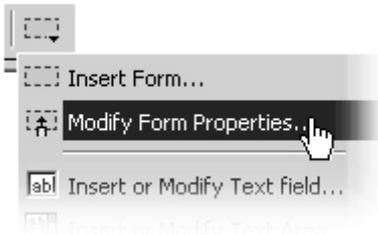

To insert a form use the 'insert form' link from the form menu:

1. Select desired position then click the 'Insert Form' icon. A new window will pop-up with the following fields: 'Name' - name of form; 'Action' - location of script that processes the form and 'Method' - post, get or none. (Shortcut key is Ctrl + m)
2. Fill in the form details or leave blank for a blank form.
3. When finished, click the 'Insert Form' button to insert form, or click 'Cancel' to go back to the editor.

Modify Form Properties

This command allows you to change the properties of an existing form in your document.

To modify form properties:

1. Click anywhere inside a form to modify it.
2. Click the 'Modify Form Properties' link. A pop-up window will appear with the form's properties.
3. Click the 'Modify Form Properties' button to save your changes, or click 'Cancel' to go back to the editor.

Note: A form must be selected to use this function.

Insert / Modify Text Field

This command will insert a text field or allow you modify an existing text field in a form.

To insert a text field:

1. Select desired position then click the 'Insert/Modify Text Field' icon. A pop-up window will appear with the following attributes: Name - name of text field; Character width - the width of the text field, in characters; Type - type of text field (Text or Password); Initial value - initial text in field and Maximum characters - maximum number of characters allowed.
2. Set the attributes then click the 'Insert Text Field' button to insert text field, or click 'Cancel' to go back to the editor.
3. To modify a text field's properties, select desired text field and click the 'Insert/Modify Text Field' icon. A pop-up window will appear with the text field's attributes.
4. Modify any attributes desired, then click the 'Modify Text Field' button to save changes, or click 'Cancel' to go back to the editor.

Insert / Modify Text Area

This command lets you create a text area or modify an existing text area in a form.

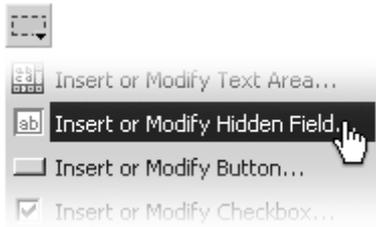

To insert a text area:

1. Select desired position then click the 'Insert/Modify Text Area' icon. A pop-up window will appear with the following attributes: Name - name of text area; Character width - the width of the text area, in characters; Initial value - initial text in area and Lines - number of lines allowed in the text area.
2. Set the attributes then click the 'Insert Text Field' button to insert the text area, or click 'Cancel' to go back to the editor.
3. To modify a text area's properties, select desired text area and click the 'Insert/Modify Text Area' icon. A pop-up window will appear with the text area's attributes.
4. Modify any attributes desired, then click 'Modify Text Area' button to save changes, or click 'Cancel' to go back to the editor.

Insert / Modify Hidden Field

This command will insert a hidden field in a form.

To insert a hidden field:

1. Select desired position & click 'Insert/Modify Hidden Field' icon. A pop-up window will appear with the following attributes: Name - name of hidden field; Initial value - initial value of hidden field.
2. Set the attributes then click the 'Insert Hidden Field' button to insert the hidden field, or click 'Cancel' to go back to the editor.
3. To modify a hidden field's properties, select desired hidden field and click the 'Insert/Modify Hidden Field' icon. A pop-up window will appear with the hidden field's attributes.
4. Modify any attributes desired, then click 'Modify Hidden Field' button to save changes or click 'Cancel' to go back to the editor.

Insert / Modify Button

This command will allow you to insert a new button or modify an existing button in any form.

To insert a button:

1. Select desired position & click the 'Insert/Modify Button' icon. A pop-up window will appear with the following attributes: Name - name of text area; Type - type of button (Submit, Reset or Button) and Initial value - initial text on the button.
2. Set the attributes then click 'Insert Button' to insert button, or click 'Cancel' to go back to the editor.
3. To modify a button's properties, select desired button and click the 'Insert/Modify Button' icon. A pop-up window will appear with the button's attributes.
4. Modify any attributes desired, then click 'Modify Hidden Field' button to save changes or click 'Cancel' to go back to the editor.

Insert / Modify Checkbox

This command will insert a new checkbox or modify an existing checkbox in a form.

To insert a checkbox:

1. Select desired position then click the 'Insert/Modify Checkbox' icon. A pop-up window will appear with the following attributes: Name - name of checkbox; Initial state - checked or unchecked and Initial value - value of checkbox.
2. Set the attributes then click the 'Insert Checkbox' button to insert the checkbox, or click 'Cancel' to go back to the editor.
3. To modify a checkbox' properties, select desired checkbox and click the 'Insert/Modify Checkbox' icon. A pop-up window will appear with the checkbox' attributes.
4. Modify any attributes desired, then click 'Modify Checkbox' button to save changes or click 'Cancel' to go back to the editor.

Insert / Modify Radio button

This command will insert a new radio button or modify an existing radio button in a form.

To insert a radio button:

1. Select desired position then click the 'Insert/Modify Radio Button' icon. A pop-up window will appear with the following attributes: Name - name of radio button; Initial state - checked or unchecked and Initial value - value of radio button.
2. Set the attributes then click 'Insert Radio Button' to insert the radio button, or click 'Cancel' to go back to the editor.
3. To modify a checkbox' properties, select desired checkbox and click the 'Insert/Modify Radio Button' icon. A pop-up window will appear with the checkbox' attributes.
4. Modify any attributes desired, then click 'Modify Radio Button' button to save changes or click 'Cancel' to go back to the editor.

Insert / Modify Image

This command allows you to browse the images you have available and insert them into a particular section of the page you are editing. This means that you can display any of the images available to you on your web page.

This will open the Image Manager. See the section titled Image Manager for more information.

Insert Textbox

This command allows you to insert a textbox into your page.

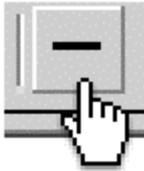

To add a text box anywhere within the page, select the location where you want the text box to reside in the active window and click on the 'insert text box icon' that will place a text box where you have specified.

To resize the text box, click on the text box frame (turn 'show/hide guidelines' on if you cannot see the textbox outline). Then click on side/corner of the frame you wish to resize from and drag to a size you require. The text you type will be contained within the text box and will stretch to the size of the text box.

Insert Horizontal Line

This command enables you to separate sections of the page with the insertion of a horizontal line.

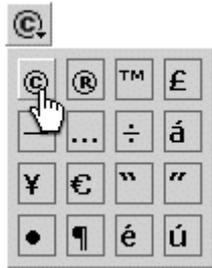

To insert a horizontal line:

1. Select the location to insert the line and click the 'Insert Horizontal Line' icon.

Insert Special Characters

You may find that you need to insert some characters that are not available on your keyboard yet are commonly used. You can choose from a selection of special characters that are available in this drop down menu.

To insert a special character:

1. Click the 'Insert Special Character' icon. A pop-up window will appear with a list of special characters.
2. Click the icon of the character to insert
3. Click the 'Insert Character' button to insert, or click 'Cancel' to go back to the editor.

Modify Page Properties

This command allows you to modify the properties of your web page.

Title: the title of the web page (not the filename)- this will appear at the top of the users' browser window.

Description: a short description that outlines what the page displays/contains

Keywords: the keywords that are contained in the page

Background color: choose a color from the drop down list that will be set as the background color of the page.

Text color: the default text color of the page

Link color: the color that the links on the page will appear. The link color needs to be distinguished from other text so that visitors to your site will know that it is a link.

Visited link color: the color that the link will change to once a visitor to your page has clicked on it once (this is useful for visitors to your page, as it allows them to keep track of which links they have already visited (especially useful if there are many links))

Active link color: the color a link turns when your mouse is clicking on it.

To modify page properties:

1. Click the 'Modify Page Properties' icon. A pop-up window will appear with page attributes: Page Title - title of page; Description - description of page; Background Image - The URL of the image currently set as the page background image; Keywords - keywords page is to be recognized by; Background Color - the background color of page; Text Color - color of text in page and Link Color - the color of links in page.
2. When finished modifying, click the 'Modify Page' button to save changes, or click 'Cancel' to go back to the editor.

Clean HTML Code

This command allows you to clean out tags and messy code from your HTML to optimise your page.

To clean HTML:

1. Click the 'Clean HTML Code' icon. This will remove any empty span and paragraph tags, all xml tags, all tags that have a colon in the tag name (i.e. <tag:with:colon>) and remove style and class attributes.

Absolute Positioning

This command allows you to use absolute positioning on the text or images.

To position a text box or image using absolute positioning, select the 'absolute positioning' icon and click and drag an image or text box to the location you would like it to reside within the active window. Turn 'show/hide guidelines' on if you cannot see the textbox outline.

Show / Hide Guidelines

This command allows you to view that sections of your page are within tables and within forms. It is handy for grouping and ungrouping your contents and for viewing the organization of your page's contents.

To show or hide guidelines:

Click the 'Show/Hide Guidelines' icon. This will toggle between displaying table and form guidelines and not showing any guidelines at all.

Tables and cells will have a broken gray line around them, forms will have a broken red line around them, while hidden fields will be a pink square when showing guidelines.

Note that the status bar (at the bottom of the window) will reflect the guidelines mode currently in use.

WORKING WITH IMAGES

Images on the web

Images are used to add photos and animations (such as your company's logo and product pictures) to your web pages.

There are two main types of image files you will use, '.gif' and '.jpeg/.jpg'.

GIF is an acronym for **G**raphics **I**nterchange **F**ormat, created so that images could be exchanged regardless of which operating system you were on. The file format is known for its compression and the fact that it can store and display multiple images for animation. The major drawback to GIF is that images are displayed with less colors than JPEG files, which doesn't make GIF's the best choice for photographic images.

You would choose the .GIF format for:

- Images with a transparent background.
- Animated graphics
- Less complex images containing 256 colors or less

JPEG/JPG is an acronym for (developed by) the **J**oint **P**hotographic **E**xperts **G**roup. This file format is the Internet standard for presenting photo realistic images. It has the capability to compress large images down to very small file sizes while retaining the overall photographic quality of the image.

You would choose the .JPG format for:

- Photographs
- More complex images
- When you can get better quality AND a smaller file size (using a method called compression)

Like HTML files, image files also have a filename.extension. For example:

- smile.jpg is a JPEG (a compressed digital image file format) named "smile"
- laugh.gif is a GIF (a graphics file format) named "laugh".

Image Manager

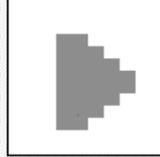

Image Manager

Images - View, Insert, Rename, Delete or Upload
Directories - Rename, Delete or Create directories

My Images and Folders

Current Working Directory: /content1

File Name	File Size (bytes)	Last Modified	Action
 test	125	4/8/2003 3:02:28 PM	Rename Delete

<p>1x1.gif</p>  <p>43 bytes</p> <ul style="list-style-type: none">ViewInsertBackgdRenameCopyDelete	<p>bullet1.gif</p>  <p>60 bytes</p> <ul style="list-style-type: none">ViewInsertBackgdRenameCopyDelete	<p>clock.jpg</p>  <p>7579 bytes</p> <ul style="list-style-type: none">ViewInsertBackgdRenameCopyDelete	<p>d'arcy_doyle1.jpg</p>  <p>9204 bytes</p> <ul style="list-style-type: none">ViewInsertBackgdRenameCopyDelete
<p>d'arcy_doyle2.jpg</p>  <p>8990 bytes</p> <ul style="list-style-type: none">ViewInsertBackgdRenameCopyDelete	<p>d'arcy_doyle3.jpg</p>  <p>8991 bytes</p> <ul style="list-style-type: none">ViewInsertBackgdRenameCopyDelete	<p>hands.jpg</p>  <p>8992 bytes</p> <ul style="list-style-type: none">ViewInsertBackgdRenameCopyDelete	<p>icon_undo.gif</p>  <p>8993 bytes</p> <ul style="list-style-type: none">ViewInsertBackgdRenameCopyDelete

The Image Manager is similar to the File Manager, the difference being - it is an area where you can see your image files and image folders. In the image manager you will see:

- The name and a preview shot of the image for quick reference.
- The size of your images as well as the date last modified shown for each image folder.
- When you put your mouse over certain text, a comment will appear which tells you what clicking on the link will do. Links are view, insert, backgd, rename, copy and delete.

Note that image files are not editable in this editor.

The image manager allows you to organize your image files into relevant groups of folders. The Online Editor has a very simple to use, yet powerful Image Manager that makes it easy to organize your image files and folders.

For Images you can:

- Insert
- View
- Delete
- Set as background
- Copy
- Upload
- Rename

All folders are represented with the folder  icon and files all image files have a small preview. The Current Working Directory, located directly above the Images, will at all times reflect your current location in the file system, relative to your document root.

Uploading an Image

Upload

Click 'Browse' and locate the file you wish to add. Click 'OK' to upload your file. This may take a few minutes depending on the size of the file and your internet connection. Click 'Cancel' to return to the previous screen.

You may want to upload an image to keep it handy in the image manager for inserting into your web pages. You can upload an image for later use or to insert into your pages as many times as needed. Your uploaded images can be viewed as thumbnails (smaller versions of the actual image – for easy browsing).

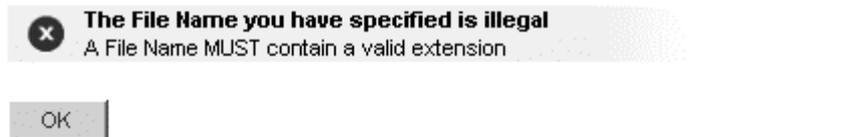

To upload an image:

1. Click the 'Upload Image' button at the bottom of the Image Browser. This will take you to another screen that prompts for an image to upload.
2. Click the 'Browse' button to open a 'Choose File' box that allows you to select a local image to upload.
3. Once the file has been selected, click 'OK' to begin uploading the file, or click 'Cancel' to be taken back to the Image Manager

Upon successful upload of the image, you will be taken back to the Image Manager.

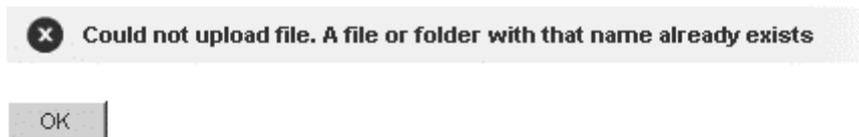

If the image is in an invalid format the following error message will appear:

Invalid Name

If the name of the image you are uploading already exists, you will get the following error message and you will need to rename the image before uploading it:

Upload File / Image

Once your image has been successfully uploaded, you will receive the following message:

Upload File / Image

Viewing an Image

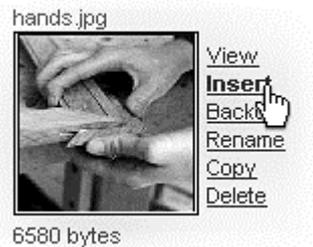

You may need to view an image to see what it will look like when displayed on your website. Viewing an image doesn't change it.

To view an image:

1. Select the desired image and click on the 'View' link. The image will be shown in a pop-up window in its full size.

Close the window to return to the Image Manager

Inserting an Image

Once you have uploaded an image, you can insert it where you need to. Just select the area on your page you want the image, and select browse the images to select the image you need.

To insert an image:

Click the 'Insert' link in the image browser next to the image to be inserted.

Set background Image

There may be a certain image you have uploaded that you want to set as the background image of your web page.

To set an image as a background image:

Click the 'Backgd' link in the image browser next to the image to be set.

The image will be set as the current page background image.

Renaming an Image or a Folder

Rename

Enter the new name for 'sydney.jpg'. Click 'OK' to rename. Click 'Cancel' to return to the previous screen.

The screenshot shows a dialog box titled "Rename sydney.jpg". It features a text input field for entering a new name. Below the input field are two buttons: "OK" and "Cancel".

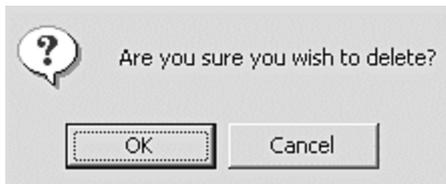

When creating a file or folder, you may have chosen a name that you then decide is not appropriate or needs to be changed to reflect its contents or context better. The 'rename' function will allow you to easily change the name of the file or folder as you require.

To rename:

1. Select the desired image or folder and click on the 'Rename' link. This will take you to another screen that requires a new name for the image/folder.
2. Enter a valid name and click 'OK' to rename, or click 'Cancel' to be taken back to the Image Manager. Valid image names consist of
 - Alphanumeric characters (a-z, A-Z 0-9)
 - The underscore '_' or a dash '-'.
 - MUST have a single dot '.' and be followed by an extension.

Valid image extensions are specified in the configuration file.

Deleting an Image file or Folder

You may no longer have a need for a certain file or folder. You can choose to keep it, or if you are sure it doesn't need to be used again, you can PERMANENTLY delete it. Only use the delete function if you are sure you do not need the file/folder and its contents.

To delete:

1. Select the desired image or folder and click on the 'Delete' link. You will be prompted for confirmation of the deletion.
2. If you are sure you wish to delete the selected image/folder, click 'OK'. Clicking on 'Cancel' will take you back to the Image Manager.

Copying a Image file or Folder

Copy

Enter the new name of the file you wish to copy 'sydney.jpg'. Click 'OK' to copy. Click 'Cancel'.

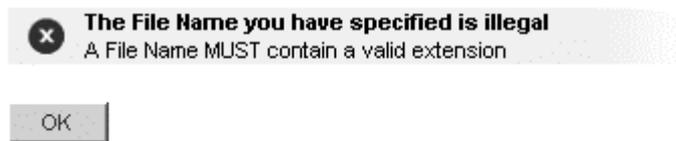

If you need two or more files that are similar, or need to copy the contents of a file or folder to make modifications, you will need to copy them.

1. Click on the 'copy' link corresponding to the file or folder that you wish to copy
2. For files: Enter the name of the new file you wish to copy to, in the format filename.extension
For folders: Enter the name of the new folder that you wish to copy to.
3. Click on 'OK' to copy (Or Click 'cancel' to return to the previous screen)

For files, if the new file name you entered an invalid file name, the following error message will appear and you will need to enter a valid filename:

Invalid Name

If the new file or folder name you entered already exists, you will receive the following error message and you will need to enter another name for the new file/folder name:

Copy

Once your file or folder has been successfully created, you will receive the following message:

Copy

SHORTCUT KEY INDEX

- 'Ctrl' is the abbreviation of the 'control'.
The 'ctrl' key is situated on the bottom left of your keyboard
- '+' indicates to hold 'ctrl' down whilst pressing the character specified on the right of the plus sign.

Function	Shortcut Keys
Editor	
Bold	Ctrl + b
Copy	Ctrl + c
Cut	Ctrl + x
Insert Image	Ctrl + m
Insert Table	Ctrl + t
Italic	Ctrl + i
Paste	Ctrl + v
Paste from Word	Ctrl + d
Check Spelling	F7
Preview (800 x 600)	Ctrl + F12
Redo	Ctrl + y
Save	Ctrl + s
Exit without saving changes	Ctrl + w
Switch editing modes	Ctrl + Tab
Underline	Ctrl + u
Undo	Ctrl + z
Insert or modify hyperlink	Ctrl + k
Insert or modify hyperlink	Ctrl + k
File Manager	
Create a New File	Ctrl + F10
Create a New Folder	Ctrl + F11
Upload a File	Ctrl + F9

GLOSSARY

Term	Description
Application Program	A software program that is designed to enable the user to perform a specific task. An example of an application program is a work processor.
Backup	A copy of the original contents. It is good practice to make backup copies of files.
Browser	A program that allows you to traverse and view internet web pages
Bug	A computer error
